

Spice Up Your Meals Without Salt!

We all need some sodium, but too much sodium can be harmful to our health. Too much sodium can lead to high blood pressure, heart disease, stroke, and kidney disease.

Sodium is the main ingredient of salt. All types of salt, for example, table salt or sea salt, are high in sodium.

Healthy adults only need about 1500 milligrams of sodium each day. This is the amount of sodium in 2/3 teaspoon of salt.

One way to decrease the sodium in our diet is to avoid adding salt when cooking. There are many combinations of flavourful ingredients to make food tasty without adding salt.

If you would like an adventure in the kitchen you can start by choosing one or more of the ingredients in the chart below to rub, sprinkle, stir-fry or add to your favourite dishes. If you would like to follow a recipe, see the samples below. Everyone likes different flavours; these are a few ideas to get you started.
